

4012

A large green Kelly Tillage System Model 4012 is shown from a top-down perspective. The machine features a central vertical frame with two long, curved arms extending outwards, each equipped with a series of sharp, pointed teeth. A horizontal beam with three tires is attached to the central frame. The entire machine is set against a white background with green decorative elements.

Unpacking

Unpacking

We recommend the use of suitable lifting equipment with a lifting capacity of at least 4 tonnes.

- Before unloading any loads please inspect exterior for damage

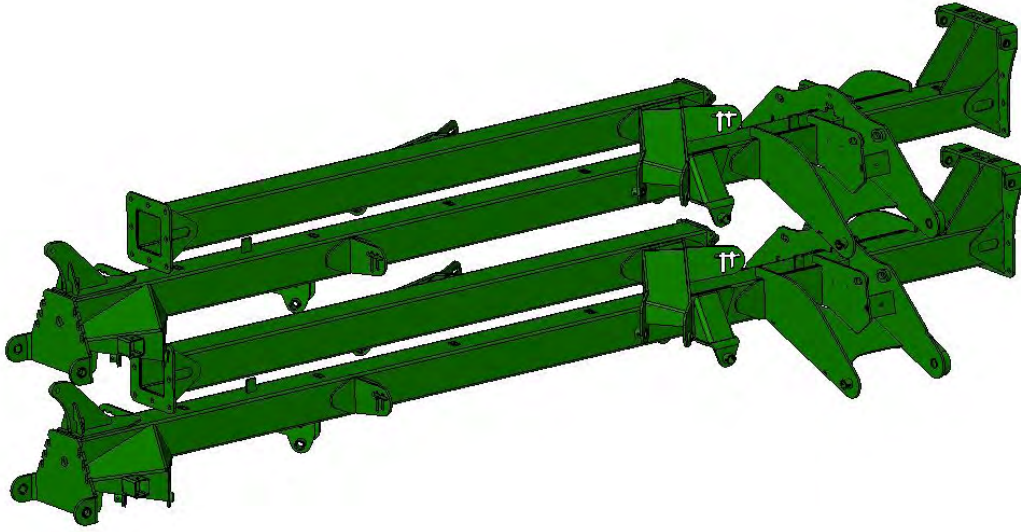

CAUTION

Take care when opening doors as load may have shifted or restraints may have broken.

- Remove boxes from doorway of container one at a time using a forklift truck. Each box weighs up to 5512 lbs (2500kg)
- Check strapping on each bundle before attempting to remove
- Attach chains to the packing frame using shackles and using suitable equipment (eg. fork-lift or tractor) drag framework bundles out of container. To move bundles away from front of container lift from side with forklift. Do not lift under angle iron frame, lift only under centre frame. Each bundle weighs approximately 7000 lb (3200 kg).

CAUTION

Before cutting straps attach slings or chains and take the weight of the frames to avoid them slipping or falling and causing injury.

CAUTION

Wear eye and hand protection when cutting straps. Sharp edges are exposed as straps separate and may cause injury.

CAUTION

To avoid falling or moving components, before cutting straps attach slings or chains to individual pieces and only cut the straps holding the piece to be lifted.

- Remove boxes from rear of container one at a time using a forklift truck. Each box weighs up to 5512 lbs (2500 kg)
- Cut straps holding bundles and separate parts and place in assembly area
- Once all parts have been identified, the machine is ready for assembly
- Identify parts for each machine by serial no. or description and separate. Open parts box and check that all parts are accounted for against checklist
- Read assembly instructions before proceeding.

Section 3

Decal Application

DECAL APPLICATION INSTRUCTIONS

- 1. CLEAN**
Wipe application surface and allow to fully dry. Ensure the area is free from dirt and contaminants.
- 2. PEEL BACKING**
Carefully peel away paper backing.
- 3. ALIGN AND PRESS**
Align the decal and carefully place it on surface.
- 4. SMOOTH**
Use a squeegee to smooth design over surface, from top to bottom and to push out all remaining air. Ensure full coverage with no bubbles.

For the Kelly Harrow 3009 Decal (0801-SKDH3009), follow this instructions below:

- 1. CLEAN**
Wipe application surface and allow to fully dry. Ensure the area is free from dirt, and contaminants.
- 2. PEEL BACKING**
Carefully peel away paper backing, ensuring vinyl sticks entirely to tape.
- 3. ALIGN AND PRESS**
Align the decal and carefully place it on surface.
- 4. SMOOTH**
Use a squeegee to smooth design over surface, from top to bottom and to push out all remaining air. Ensure full coverage with no bubbles.
- 5. REMOVE TRANSFER TAPE**
Carefully peel away the transfer tape, beginning at the corner until completely removed. Finally, allow decal to cure for 24 hours before washing.

For the Fold/Unfold Decal (0801-S1), follow this instructions below:

- 1. CLEAN**
Wipe application surface and allow to fully dry. Ensure the area is free from dirt and contaminants.
- 2. APPLY SOLUTION**
Using detergent wet the surface where you'll be applying the decal so you can slide it around.
- 3. PEEL BACKING**
Carefully peel away paper backing.
- 4. ALIGN AND PRESS**
Align the decal and carefully place it on surface.
- 5. SMOOTH**
Use a squeegee to smooth design over surface, from center to corners and to push out all remaining air. Ensure full coverage with no bubbles.

Fitting Cast Link Pins

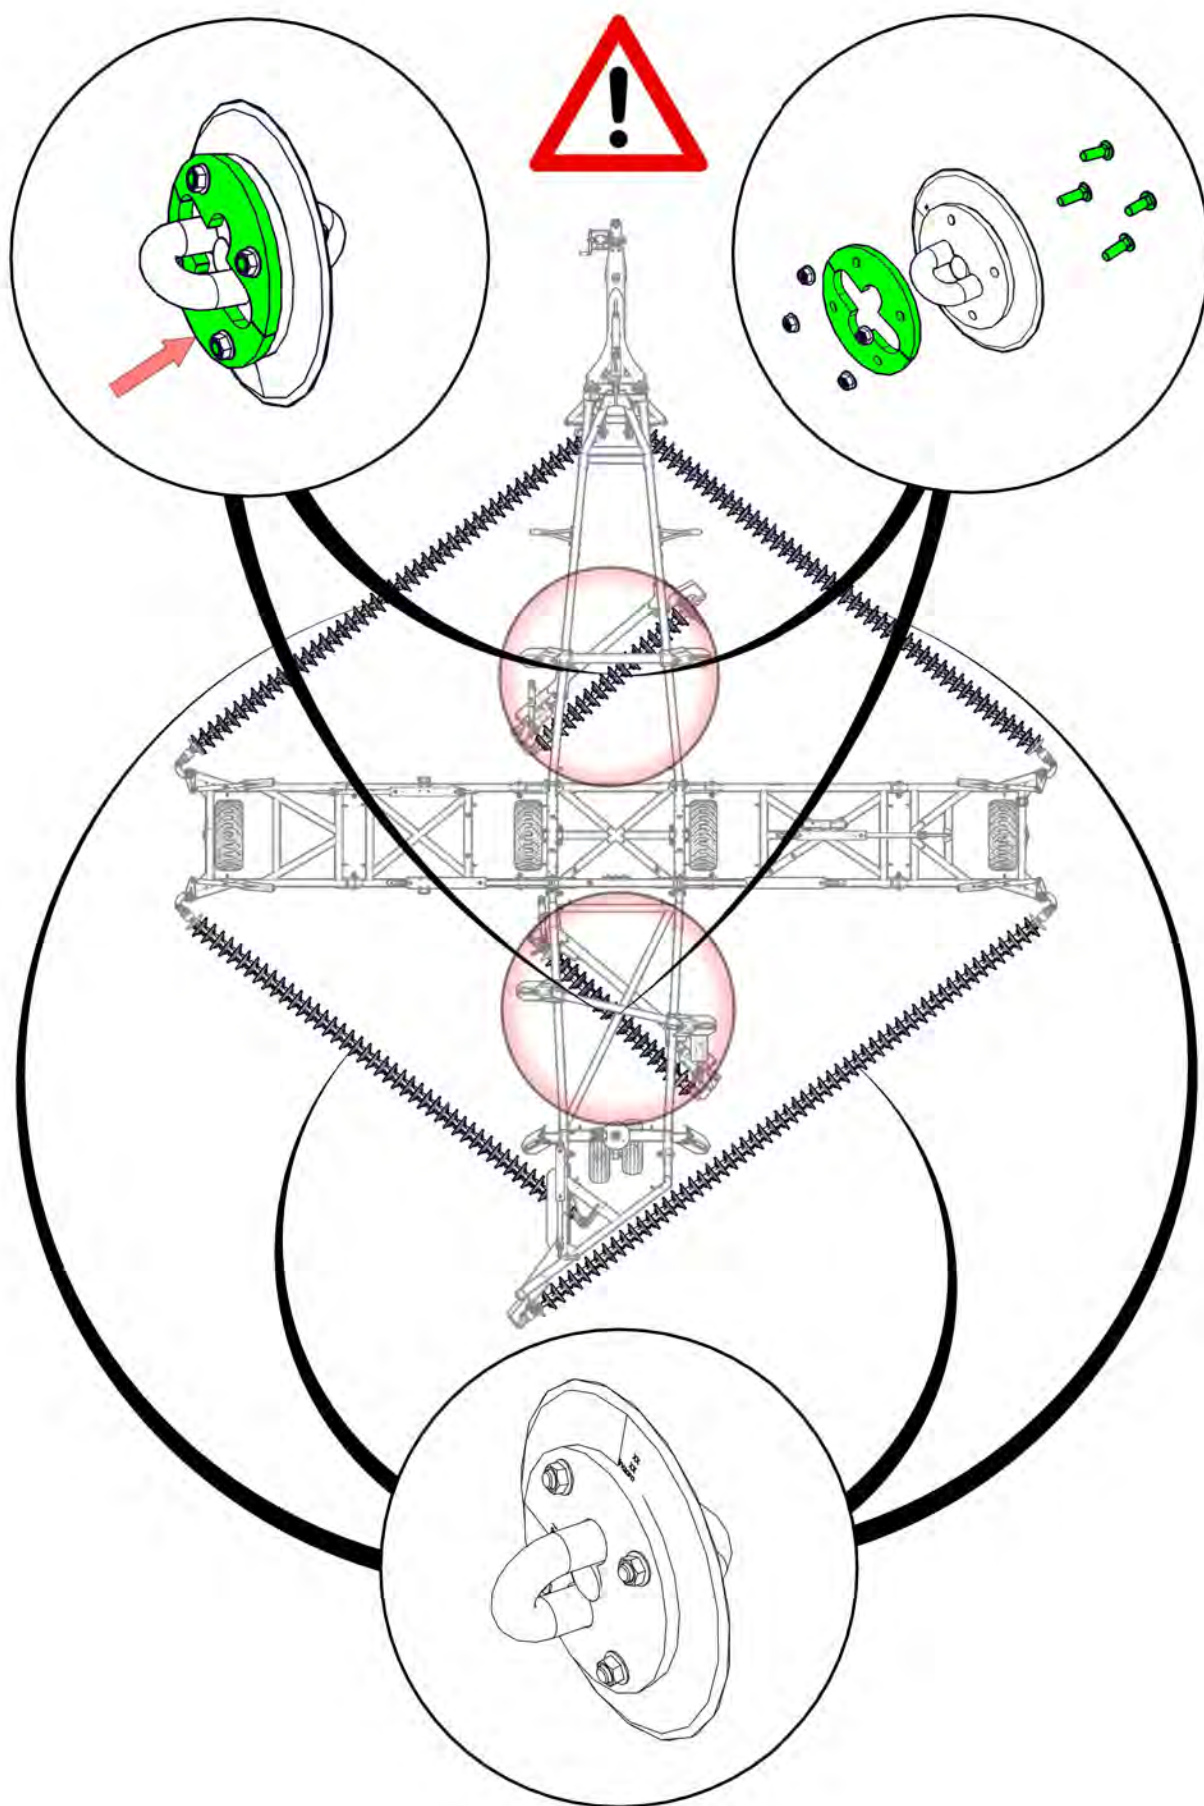

Please install cast link retaining Pins (Roll Pin Zinc Plated 3/8" x 2", part number 0262-3-8X2) on all cast disc links.

Failure to do this could lead to the discs becoming dislodged during transport causing severe damage or injury.

Description
12m Light Kit USA

Part Number
1502-USLK-12M

For Example

Swivels attached to the leading ends of the chains should have the rotating seal end attached to the chain like shown

Swivels attached to the trailing ends of the chains should have the fixed housing end attached to the chain like shown

Operating speeds

Recommended operating speeds in normal conditions with all chain types	
Operating and working speeds	6-8 mph / 10-12 kph
Transporting / towing speed	15 mph / 25 kph

Tire Pressure

Tire size	Ply	PSI	KPA
400/55-22.5	18	50	350
11L/15	10	44	300

4012 specifications

Model 4012	All measurements are a guide only and may be +/- 1"
Operating width	12.93 m / 42'5.14"
Transport width	3.44 m / 11'3.42"
Transport height	3.88 m / 12'8.77"
Transport length	14.68 m / 48'1.98"

[1] When fitting a wheel and tyre to a hub, tighten the wheel nuts in a star pattern to the correct tension. To achieve this, choose a wheel nut and tighten, then proceed to the opposite side of the hub to the next wheel nut and tighten and so on until all wheel nuts are tight. Then repeat the procedure to check that all nuts are tight. Do not use impact tools to tighten wheel nuts.

For a guide to the correct tension of the wheel nuts, please use the appropriate tension for your size wheel nuts from the Bolt Torque Settings table.

Torque values are for dry threads and surfaces however, it is permissible to apply a small amount of anti corrosive oil to the threads.

Disc Chains Lengths and Quantities

Model	Length	CL2	CL1	K4	W36	R300	SD49	Prickle chain	
		CL2 disc chain also requires CL1 disc chain							
4012	Front right	23'5.69" / 7.16m	CL2 - 32 CL1 - 2	44	45	42	57	57	79
	Front left	23'5.69" / 7.16m	CL2 - 32 CL1 - 2	44	45	42	57	57	79
	Rear right	29'8.69" / 9.06m	CL2 - 31 CL1 - 15	55	57	53	72	72	101
	Rear left	21'9.85" / 6.65m	CL2 - 29 CL1 - 2	41	42	39	53	53	74
	Front module	8'6.09" / 2.59m	CL2 - 10 CL1 - 3	16	16	15	21	21	29
	Rear module	8'6.52" / 2.60m	CL2 - 10 CL1 - 2	16	16	15	21	21	29

For correct chain tension, chain links may need to be removed from the end of the chain as follows:

CL2 Disc Chain - unhook disc chain link/s from end of the disc chain

K4 Disc Chain - unhook disc chain link/s from end of the disc chain

CL1 Disc Chain - unhook disc chain link/s from end of the disc chain

Spiked Disc Chain - cut a disc chain link from the end of the disc chain

R300 Disc Chain - cut a disc chain link from the end of the disc chain

W36 Disc Chain - cut a disc chain link from the end of the disc chain

Prickle Chain - cut a prickle chain link from the end of the prickle chain

Section 7

Operation

Basic Operation

Unfolding:

1. Walk around and inspect the machine.
 - a. Check that chains are not hooked on framework
 - b. Check swivel units are in place and not broken
 - c. Check that height adjusting chains have not fallen out of their slotted plates during transport.
 - d. Ensure front lift cylinder depth stops are fully engaged on cylinder shaft.
2. Lower front A frame to working height.
3. Unfold wings holding the hydraulic lever until both the main center cylinder pins have centered in their slots. (If chain pulls tight during unfold, stop and inspect if chain is hooked)
4. Lower rear tail by holding hydraulic lever until tail and modules are completely lowered to working position.
5. Walk around and check that all chain links are straight and that working height of all swivels is correct for field conditions. Adjust if necessary.
6. Move off with all chains in working position. If necessary it is acceptable to raise front A frame to transport height. This will lift the front chains off the ground and reduce the load on the tractor. Lower the front A frame once moving satisfactorily.

Folding:

1. Lower the front A frame at working height. (This is important to ensure that all chains locate correctly in their transport rests).
2. Raise the Rear Tail and modules by holding the hydraulic lever until they come to a complete stop.
3. Fold the wings. They should move as follows; main center cylinders will retract, one or both, until the wings stand vertically. The left outer wing then the right outer wing will fold down.
4. Raise front A frame to transport height.
5. Walk around and check that chains have located correctly in transport rests.

Importance of chain tension

Operational

Chain tension is critical to achieve a smooth and level seedbed. A correctly tensioned, monitored and maintained chain will deliver the results you need. Incorrect chain tension can lead to :

- Uneven results across the cut width of the machine
- Uneven weed control
- Unsatisfactory incorporation
- Ineffective levelling
- Accelerated or premature chain link wear (not covered by warranty)
- Chains failing to engage with transport locator's when folded
- Machine damage when folding or unfolding
- Uneven field surface with ridges and furrows being created.

A correctly adjusted machine will not cause this problem.

Chain Tension - Modules

1. Loosen the lock nut on the draw bolt.
2. Tighten the adjusting nut clockwise until the outer face of the spring retaining washer is pushed with the body of the module tensioning unit.
3. When 7-7/8" / 200mm or more of tensioner thread is visible then one link must be removed from the chain set to maintain correct tension adjustment. Spring length of 330mm / 1' 1".
4. Retighten the lock nut.

Chain Tension - Modules

Chain Tension - Wings

- Use the spanner supplied to loosen the lock nut adjacent to the tensioner assembly body.
- Turn the module tension rod clockwise to compress the coil spring to 330mm / 1' 1". Correct tension is achieved when spring retains its set length when operator rolls the chain fore and aft on the ground.
- Retighten the lock nut.
- When less than 0.98" / 25mm of thread remains visible on the adjustor bolt then a link must be removed from the chain.

Correct Chain Height Adjustment

To adjust the swivel height at the wings, relocate one of the spacers either above or below the fixed mounting tube. Each Dropleg has four pairs of 0.98" / 25mm cast spacers. The most common set up is to have two pairs of cast spacers on the bottom and two pairs of cast spacers on the top.

Below is the process to adjust the Dropleg height.

1	Loosen chain tension completely
2	Undo 2 x M10 bolts from corresponding spacer set and take the two halves off of the drop leg tube
3	Replace it in the selected position after raising or lowering the drop leg
4	Reinstall the M10 bolts and re-tension the chain

It is possible to install all spacers either above or below the mounting tube giving a maximum of 4" / 102 mm of adjustment.
