

W36 Disc Chain

Our tried and tested workhorse.

The W36 Disc Chain is a lightly curved disc made from wear resistant steel welded to a heavy chain, this offers superior wear resistance and reliability.

Ideal for mulching residue and leveling soil, the W36 Disc excels at splitting and breaking residue to accelerate decomposition. The W36 Disc Chain is our wet weather specialist. Used alone or in combination, the shallow concave and smooth surface performs in wet and sticky soils like nothing else can.

Fit the CL1 to the front and the W36 to the rear of your KELLY Tillage System to create versatile chain combination for a wide range of conditions.

UNIT WEIGHT	CHAIN WEIGHT	DISC CONCAVITY	DIAMETER	SPACING
20lb	37lb/ft	25°	13"	6.5"
