

R300 Disc Chain

Unit Weight: 9kg

Total Weight (per metre): 73kg/m

Degree of Concave: 35 degrees

Diameter: 325mm

Spacing: 125mm

Close disc spacing makes this disc perfect for sandy soils

The R300 Disc Chain consists of a concave wear resistant steel plate welded to a heavy steel chain with a 125mm (5 inch) disc spacing.

The 125mm disc spacing and deep dish increases overall surface area and provides depth control in sandy soils, promoting shallow tillage in light and sandy soils.

The R300 is best suited to light to medium soils, and provides complete coverage when working shallow for improved weed control.
