

# Prickle Chain Modules

## Strong, light and adaptable.

### One-Pass Levelling

KELLY Prickle Chain modules are designed to level and close soil for efficient seeding and tillage. The rolling chains have a packing effect, optimising seed/soil contact for improved germination.

### Built to Last

The angle and orientation of the steel spikes reduces the buildup of residue on the chain, while the smooth swivels reduce wrapping. With durable sealed bearings and tough, flexible chain links, this versatile unit has a long working life.

### Simple Installation

The module assembly comes with mounting brackets and hardware ready to install on 75-100mm frame sizes. All brackets are fully adjustable for easy mounting to your machine. The design of the mounting hardware suits double fold machines, supporting the modules even when they're turned upside down during machine folding.

### Work to the Conditions

The modules come with 1.5m coverage as standard. Module beams can be shortened to provide a customised fit for your machine. Working angle can be easily adjusted for optimum performance.
