

Prickle Chain

Ideal for levelling and packing soil

The Kelly Prickle Chain is made from 20mm chain with 20mm resistant steel rods welded through each link. This equates to 132 spikes per metre of coverage, roughly double any other prickle chain on the market.

The Prickle Chain is extremely efficient in levelling soil surfaces and incorporating liquid, solid and granular fertilisers. The chains roll and gently pack the soil while levelling ridges and filling furrows.

Self cleaning is another benefit of the Prickle Chain, with the angle and orientation of the spikes preventing residue build up. Fitted to either our Kelly Diamond Harrow or Kelly Prickle Chain Modules, the Kelly Prickle Chain is the perfect finishing tool.

Total Weight (per metre)	Spikes per metre
25kg/m	132 per metre
