

K4 Disc Chain

- High-durability steel construction
- 2-4cm working depth
- Requires 18kw/25hp per metre of working width
- Designed for weed control
- Replaceable bladed disc
- 12-14km/h optimal working speed
- Performs in a broad range of soil types

Unit Weight	Chain Weight	Disc Concavity	Diameter	Spacing
11kg	68kg/m	25°	330mm	160mm

K4 Disc Chain

The K4 Disc Chain is a new disc specifically designed for enhanced weed control in a broad range of soil types. This disc sits between the heavy, more aggressive CL2 Disc Chain and the versatile CL1. The K4 combines the benefits of a replaceable bladed disc with the efficiency of a lightweight build and closer disc spacing.

K4 Disc Chain has a 160mm disc spacing, ensuring an overlap that provides over 100% soil coverage, even while working shallow. With a sharp edge and smooth face, this disc effectively translates the superior weed-killing power of the CL2 Disc Chain to a lighter, less aggressive unit.

The K4 platform centres on a hook and eye system to which a replaceable bladed disc is bolted. Links are connected to form a Disc Chain, which is secured by a locking bolt. Links can be added or removed from the chain without the need for disassembly.

This Disc Chain performs exceptionally in moderate conditions, running fast and shallow. The discs dig 2-4cm deep, and have an optimal working speed of 12-14km/h. Weighing 68kg per metre, K4 Disc Chain requires 18kw/25hp per metre to work effectively.* The K4 has been extensively field tested; like all Kelly Disc Chains, this tool offers years of use.

**horsepower requirements are an estimate and dependent on soil conditions*
